

Blind Spots, Corners & Intersections Are **DANGEROUS**

How wonderful would it be if you could hire someone to be there at all times to alert oncoming traffic? Let the Safety Plus be your eyes & ears!

In 2005, studies show that 20% of all forklift incidents in the U.S. were from pedestrians being struck. **Don't be part of this statistic!**

The safety plus will detect movement and safeguard pedestrians by LED light and alarm. Yale Materials Handling - Green Bay, Inc. can help you avoid costly situations that can seriously jeopardize your business operations.

Call me today to discuss how we can help you keep your employees and equipment safe!

Safety Plus

Ideal for end of rack aisles. LED warning lights blink on each side warning approaching traffic that there is a moving object around the corner.

Safety Elite

Similar to Safety Plus. But larger unit with 2 LED lights on each side. More visible and easier to respond to.

Safety 3-Way

Great for a 3-way intersection. Next to or including pedestrian hallways. Hangs from the ceiling above and centered in the intersection for outstanding recognition.

Safety 4-Way

Excellent for 4-way intersections. Helps regulate traffic in a voluntary fashion warning of approaching movement of other pedestrians or vehicles/units.
